

# Agile Startup Training

## Scrum – The Agile Framework

Scrum is an iterative and incremental process for agile product development as well as for organizing teams.

Tasks are performed faster and with higher quality by means of Scrum frameworks. High levels of self-motivation achieve are the reason because Scrum allows the team to decide for itself when the tasks should be performed and in which way this is to be done. Customer requirements are prioritized iteratively and fulfilled promptly.

## Kanban & Lean

Kanban and Lean were used to improve and accelerate the operations of manufacturing companies, like Toyota. In the meanwhile these methods have been proven to be useful in industries like Software development as well. Our trainers will introduce you to the principles and explain tools like Kanban and value stream mapping, we will compare Kanban and Scrum and what to use in specific project situation.

## Agile Startup Training

This two days Agile Startup Training provides everything you need to get started with Agile and Lean. The largest and fastest-growing agile project management methodologies, Scrum and Kanban are a powerful project management techniques. They have a small set of interrelated practices and rules, are not overly prescriptive and are able to produce productivity gains for software development teams almost immediately.

## General information

The Agile Startup Training conveys an elaborate knowledge about the Scrum and Kanban frameworks and the Agile Principles in general. During the course, attendees will learn why such seemingly simple processes can have profound effects on an organization. Participants gain practical experience working with Scrum tools, learn about the Kanban flow management and use tools like the product backlog, sprint backlog, daily standup meetings, sprint planning meeting, and retrospectives.
